EDUCATION

The University of Texas at Austin

Austin, TX

Bachelor of Science, Computer Science

Aug 2017 – Dec 2021

Coursework: Data Structures, Algorithms, Software Engineering, iOS Mobile Computing, Modern Web Apps, Object-Oriented Programming, Network Security and Privacy, Computer Architecture, Operating Systems

WORK EXPERIENCE

Global Consumer Technology Analyst

Jun 2021 – August 2021

Citi – Internship

Dallas, TX

- Contributed to Common UI's Angular component library providing reusable and generic components across teams
- Designed the Intersource Library, an open-source platform allowing dev teams to upload/share components
- Presented information in research spikes and created documentation on best practices and industry trends
- Implemented feedback mechanism and QoL features/fixes using Material UI for End of Year Feedback project
- Collaborated with other interns to develop mini-projects as part of AWS training modules

Full Stack Engineer

Apr 2020 – May 2021

ProMazo – Contract

Remote

- Collaborated in Scrum teams to plan sprint milestones and help other developers complete tasks
- Developed MiMino, a data-driven PWA using React assisting students in organizing their job search process
- Released 100k Mentor Challenge, a React Native app facilitating mentorships between students and professionals
- Maintained a Chrome extension that scrapes data from career search websites to import into MiMino
- Updated the GraphQL API and schema and user CRUD operations using AWS AppSync and Cognito

Frontend Engineer

Aug 2020 – Jan 2021

Edge Learning – Contract

Austin, TX

- Developed a React/Redux SaaS platform that tracks student progress for college readiness to parents
- Designed, wireframed and implemented changes to provide consistent UI/UX across all device sizes
- Communicated issues and planned features in meetings with board executives, following Agile methodology

PROJECTS

Books For You | *React (TypeScript), Flask, PostgreSQL, AWS*

Feb 2021 – May 2021

- Led a SWE team to build and deploy a dynamic React app allowing users to browse books, authors, and quotes
- Developed a Flask server to retrieve data from the PostgreSQL database populated by scraping public APIs
- Designed the Bootstrap frontend and implement features such as pagination, searching, filtering, and sorting

Outreach | *React (TypeScript), Redux, AWS*

Jan 2021

- Collaborated on a Citi hackathon project aiming to help investors browse minority-owned businesses to offer loans
- Deployed the AWS Amplify backend with an API and authentication supporting two user types
- Built the AWS AppSync schema and used GraphQL queries to inject user data into frontend components

Matchus | *Swift, Django*

Sep 2020 – Dec 2020

- Collaborated on an iOS dating app using Swift and Xcode that matches users based on preferences and interests
- Implemented location services and cities autocomplete search using Google Maps SDK
- Developed a Django backend to authenticate users and access endpoints for location and interest data

Discord Bot Development | *Java, MySQL*

Dec 2018 – Sep 2019

- Collaborated on a Java bot to allow communication between Clash Royale players for card trades
- Retrieved player data via HTTP requests to a public REST API, build Discord commands to filter data
- Maintained a MySQL database of registered bot users and storage of user wish lists
- Used in 85 Discord servers, with 500+ players registered and 400+ wish lists created

TECHNICAL SKILLS

Languages: Java, Python, C/C++, Swift, MySQL/PostgreSQL, GraphQL, JavaScript, TypeScript, HTML/CSS

Frameworks: React, Redux, Angular, Node.js, Flask, Express, Django

Developer Tools: Git, Docker, AWS (AppSync, Amplify, Cognito, DynamoDB, ElasticSearch)

Background: Full Stack, UI/UX, App Development (Android/iOS), Linux/Unix
